DETAILED ACTION

Claim Interpretation

The instant claims 1, 5, 6 10, 11 and 12 contain the terms “possibly” and “particularly”. These terms are interpreted to recite only optional features in the above claims. Accordingly the terms following either of "possibly" or "preferably" have been treated as only non-limiting preferred embodiments of the above claims .

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The above claims are confusing and indefinite since the claims recite that the “annealing baskets” are to be fixed on the “annealing rack element”. However, as stated in claim 1, from which this claims depend, the annealing basket is the same as the annealing rack element (claim 1 recites that the annealing element is at least one annealing basket) thereby requiring that the annealing basket be fixed to itself.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1793

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,558,615

B1 to Jungblut (Jungblut). Jungblut teaches an annealing basket (10), which is all that is the only required element of the instantly recited annealing rack, which could be stacked (this being a limitation as to the manner or method of use of the claimed apparatus and met by any prior art device which could be employed in the recited manner, see MPEP 2114), and including a bottom, meeting the limitation of a “rest”, with corner supports (12) projecting upwardly from the bottom, where the corners are connected to one another with “rack struts” (26) detachably and with a degree of “play” (the basket of Jungblut is expandable), thereby showing all aspects of the above claims.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by US 2,430,521 to McCormick (McCormick). McCormick teaches an annealing basket (Figure 1 for example), which is all that is the only required element of the instantly recited annealing rack, which could be stacked (this being a limitation as to the manner or method of use of the claimed apparatus and met by any prior art device which could be employed in the recited manner, see MPEP 2114), and including a bottom, with a “rest”, and corner supports projecting upwardly from the bottom, where the corners are connected to one another with “rack struts” detachably and with a degree of “play” (see col. 7 lines 20-25 for example), thereby showing all aspects of the above claims.

Art Unit: 1793

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,290,753 to Klefisch (Klefisch). Klefisch teaches an annealing basket (Figure 1), which is all that is the only required element of the instantly recited annealing rack, which could be stacked (this being a limitation as to the manner or method of use of the claimed apparatus and met by any prior art device which could be employed in the recited manner, see MPEP 2114), and including a bottom (12), a “rest”, with corner supports projecting upwardly from the bottom, where the corners are connected to one another with “rack struts” detachably and with a degree of “play” thereby showing all aspects of the above claims.
